

Blix Logic Blocks

Age 8+ | 152+ Parts | $268 CAD

A machine that moves is impressive. A machine that can react to its surroundings is something entirely different. Logic Blocks introduces kids to the basics of intelligent systems by combining construction with sensors, motors, buzzers, and logic-based controls. As they create and test their models, they learn screenless coding and discover how inputs are processed into actions, the same principle used in everything from automated machines to modern robotics. With guided builds and real electronic components, every project reveals a new layer of how smart systems work.

What You'll Learn

Logic Blocks introduces your children to screenless coding, system design, and basic engineering concepts. As they place the blocks, connect the wires and test each model, they discover how inputs are processed into actions — the same principle used in everything from automated machines to modern robotics.

What's In The Box

- 152+ Premium Blix Building Parts
- Step-By-Step Instruction Manual
- Wires
- IR Block
- Sensor Block
- Power Block
- Distance Block
- Not Block
- LED Block
- Motor Block
- DC Motor
- 6V Battery Box
- Parts arrive in a hard carry case

Build Models

screenless coding · 152+ parts · ages 8+

Quality-Control Conveyor

The model Blix shows on the box: a sensor reads each item on the belt, a good wheel is allowed to pass, and a bad wheel is kicked off.

The step-by-step instruction manual carries the guided sensor-and-motor builds. The blocks are snap-together and screenless — Power, Distance, Not, LED, Motor and Sensor/IR blocks driven by

a DC motor and a 6V battery box — and the set is compatible with the other Blix sets for bigger builds.
